## HUMANSCALE

Humanscale's Element Vision LED task light is designed to simultaneously provide user controllability and reduce energy consumption. The task light features cutting-edge advancements in MCX LED technology, utilizing a round, multi-chip LED package to produce a uniform, broad footprint of light. One of Vision's most exceptional features is its innovative Passive Infrared motion sensor which detects changes in the human heat profile and automatically turns off or on when the user leaves or returns to the area. Vision offers fingertip adjustability, an intuitive dimmer switch and contains 74% recycled and 98% recyclable content. [www.humanscale.com](http://www.humanscale.com)

## ANTRON CARPET FIBRE

INVISTA has revealed 105 new colours for its Antron Lumena solution dyed carpet fibre, in a finer 985 dtex, bringing carpet designers and specifiers even more creative possibilities. The spectrum of finer yarn has the same cross-section as the existing 205 colours, and provides the opportunity to create unique colour depth and new levels of textural creativity. Antron Lumena carpet fibre is solution dyed for resistance to fading from sunlight and ease of maintenance and delivers long-term durability in demanding commercial locations.

## ACTIU

Winner of a Red Dot Award for product design, the TNK A500 executive chair from Actiu is much more than a formal design. The timeless and elegant design has a rich, visual quality, created using sustainable materials with respect for the environment. The TNK A500 has a range of features, including lumbar adjustment, seat slide and seat flexors that distribute user weight and adapt user movement and posture changes. Available in a range of sizes, with a variety of base and colour options, the TNK A500 has passed tests by the Technology Institute for Furniture.

## NIKOLAS KERL

The T1 table by Nikolas Kerl is hand-crafted from chestnut and thermo-treated beech. The dining and work table combines the light, strikingly grained chestnut plate with the darker, almost black beech wood frame that acquires its tone through a unique thermal process that darkens the wood fibers from the core outwards. A Biedermeier style clamp joint suspends the table plate on its frame, allowing the wood to breath without restrictions, while the tables defining feature, its legs, angle outwards, seamlessly meshing the table with the room around it.
